

# ARIZONA SHOWER DOOR

## **CARE & MAINTENANCE GUIDE**

To keep your bath enclosure looking its best, follow these simple maintenance steps:

**Daily Care:** The most effective way to preserve the finish is to wipe down all surfaces with a soft cloth after every use.

**Standard Cleaning:** Use clean water and a soft cloth. If grime persists, use a non-abrasive, pH-neutral cleaner (pH7-8).

**What to Avoid:** \*Do not use scouring pads, sharp tools, or acid-based cleaners.

Avoid harsh detergents not specifically labeled for anodized aluminum and glass.

**A note on Water Quality:** In areas with high mineral content, tap water can cause permanent "etching" - a rough, cloudy stain that cannot be removed. To prevent this chemical damage and mineral buildup, ensure the unit is dried thoroughly after each use.
